About company

75 years of experience in the cable industry

We are among the eight largest producers of cable products in the CIS

More than 15 000 different brands and sizes of cables and wires

Member of the international associations Electrocable and Intercable

About 1000 employees

23 hectare area

ISO 9001 and ISO 14001 management systems implemented

Among our customers are enterprises of different industries

Cables and cable systems installation and supervising

100% continuous automated testing

Winner of the award Business Initiative Directions - International Gold Star

Testing centre of cable products is accredited in the National agency for accreditation of Ukraine

Recognized supplier of cable products for nuclear power plants

KEMA (Netherlands), VDE (Germany), innogy SE Eurotest (Germany), IEn (Poland) certification

Clients from Armenia, Azerbaijan, Belarus, Bulgaria, France, Georgia, Germany, India, Iran, Israel, Kazakhstan, Kenya, Kyrgyzstan, Lithuania, Moldova, Poland, Russia, Tajikistan, Turkmenistan, Ukraine, Uzbekistan

XLPE-insulated power cables produced by YUZH CABLE WORKS PJSC

CONSTRUCTION:

- conductor — compacted copper or aluminum conductor, nominal conductor cross-section from 35 mm² up to 2000 mm²;
- inner semiconductor layer, insulation, outer semiconductor layer — ultra-smooth semiconductor layers create a uniform electric field and are tightly connected with insulation, which increases the cable's resistance to short-circuit currents and the effects of heating and cooling cycles;
- screen — copper wire and copper tape counter-helix, nominal screen cross-section from 16 mm² up to 400 mm², longitudinal sealing with water swelling tape and radial sealing with aluminum foil;
- outer sheath — depending on the cable laying, it can be made of high-density polyethylene, a flame retardant polymer composition, a halogen free polymer composition or polyvinyl chloride plastic.

CABLES TYPE:

- with compacted conductors sealed of water-blocking yarns;
- with aluminum single-wire conductors;
- with conductor cross-section from 1200 mm² up to 2000 mm² (Milliken);
- flame retardant outer sheath;
- flame retardant with low smoke and corrosive gases outer sheath;
- with halogen free outer sheath;
- tropical;
- with semiconductor layer on the outer sheath;
- with metal sheath (aluminum or lead);
- with aluminum screen.

TECHNOLOGY AND MATERIALS:

- the use of vacuum packaging for the transportation of insulating materials and the closed process of their loading and extrusion provides maximum purity of insulation;
- conductive wires are twisted and compacted on a Cortinovis twisting machine. The use of layer compression allows to have

a high coefficient of compacting of the conductor and its smooth surface. Water-blocking materials are also laying on a twisting machine, if necessary;

- simultaneous insulating and laying of semiconducting screens are carried out on catenary gas vulcanization lines manufactured by Troester and Maillerfer, vulcanization is carrying out in a nitrogen medium at high temperatures and pressures (dry heat vulcanization), which makes it possible to exclude moisture from entering the insulation and obtain a smooth and homogeneous insulation without voids and inclusions, with tightly adhering semiconducting screens. The thickness and eccentricity of the layers are continuously monitored by X-ray inspection devices;
- laying of water swelling tapes, shields of copper wires and tapes, twisting of the core of three-core cables and armouring are made on the universal twisting machine Pourtier Drum Twister;
- extrusion of the outer sheaths of cables and covering with aluminopolymer tapes (if necessary) are made in the extrusion lines manufactured by Troester and Maillerfer equipped with diameter measuring instruments, sheath tightness control and a device for marking with a printing tape;
- Hipotronics test equipment complex allows to conduct partial discharge testing of cable insulation, as well as testing of finished cables with increased voltage;
- all of the above mentioned equipment has a computerized control of technological processes and tests based on mathematical, software and technical support developed by Siemens, including recipe managing system and reporting system;

MANUFACTURING MANAGEMENT SYSTEM INCLUDES THE FOLLOWING FUNCTIONS:

- automatic calculation of technological parameters of the lines (for example, for the inclined line of gas vulcanization — the layered temperature ratio as a function of time, based on the calculation of heat transfer between layers, the temperature dependence of the half-life of the peroxide, etc.);

- ensuring full synchronization of all units of lines depending on the parameters of the technological process and their changes;
- alarm and monitoring in the event of the achievement by one or more technological parameters of its critical values;
- monitoring the stability of process parameters and providing an almost instantaneous reaction to their current measurements;

The control system is equipped with modern industrial computers with an interface that allows to create, store, and if necessary, issue technological parameters or test results for making management decisions

TESTS

The cables pass routine tests, sample tests, type tests, prequalification test.

Routine tests:

- Partial discharge test
- Voltage test
- Electrical test on oversheath of the cable

Sample tests:

- Conductor examination
- Measurement of electrical resistance of conductor and of metal screen/sheath
- Measurement of thickness of insulation and cable oversheath
- Measurement of thickness of metal sheath
- Measurement of diameters
- Hot set test
- Measurement of capacitance
- Measurement of density of insulation
- Lightning impulse voltage test
- Water penetration test
- Tests on components of cables with a longitudinally applied metal tape or foil, bonded to the oversheath

Type tests:

- Bending test
- Partial discharge tests
- Tan δ measurement
- Heating cycle voltage test
- Impulse voltage tests
- Resistivity of semi-conducting screens
- Check of cable construction
- Tests for determining the mechanical properties of insulation before and after ageing
- Tests for determining the mechanical properties of oversheaths before and after ageing
- Ageing tests on pieces of complete cable to check compatibility of materials
- Loss of mass test on PVC oversheaths
- Pressure test at high temperature on oversheaths
- Test on PVC oversheaths at low temperature
- Heat shock test for PVC oversheaths
- Hot set test for insulation
- Measurement of density of insulation
- Measurement of carbon black content of black PE oversheaths
- Test under fire conditions
- Water penetration test
- Tests on components of cables with a longitudinally applied metal tape or foil, bonded to the oversheath
- Shrinkage test for insulations (220–330 kV)
- Shrinkage test for oversheaths (220–330 kV)

Prequalification test:

- Heating cycle voltage test
- Lightning impulse voltage test

YUZHHCABLE WORKS PJSC got the certificates and reports from leading world laboratories: KEMA (Netherlands), VDE (Germany), innogy SE Eurotest (Germany), IEn (Poland), VNIIKP JSC (Russia).

System of cable designation

Outer sheath	X	HDPE outer sheath
	Y	PVC outer sheath
	Xn	fire-retardant PE outer sheath
Water sealing	R	radial watertight cable
	U	longitudinal watertight cable
Cable construction	H	cable with radial electrical field
Conductor material	-	copper conductor
	A	aluminum conductor
Cable type	K	power cable
Insulation	XS	XLPE insulation
Metal sheath	-	no metal sheath
	(PB)	lead alloy sheath
Other	-WTS	watertight conductor
	-«x»T«y»FM	copper screen of cable contains «x» optical modules with «y» multi-mode optical fibers (example: 2T4FM)
	-«x»T«y»FS	copper screen of cable contains «x» optical modules with «y» single-mode optical fibers (example: 2T4FS)
	RMC	round multi-wire compacted conductor (example: 1x400RMC)
	RMS	round multi-wire compacted conductor of Milliken construction (example: 1x1200RMS)

Rated voltages

U_o, kV	U, kV	U_m, kV
26	45	52
36	60	72,5
64	110	126
76	132	145
87	150	172
127	220	252
190	330	363

In the voltage designation of cables $U_o/U(U_m)$:

U_o — is the rated power frequency voltage between conductor and earth or metallic screen for which the cable is designed;

U — is the rated power frequency voltage between conductors for which the cable is designed;

U_m — is the maximum value of the «highest system voltage» for which the equipment may be used (see IEC 60038).

45–150 kV | SINGLE-CORE CABLES

XUHAKXS, XRUHAKXS

ALUMINUM SINGLE-CORE CABLES WITH PE OUTER SHEATH

IEC 60840

Design

- aluminum compacted conductor RMC, cl. 2 (above 1200 mm² — RMS Milliken type)
- inner semiconductor layer
- XLPE insulation
- outer semiconductor layer
- semiconducting water-blocking tape
- copper wire screen and copper tape counter-helix
- semiconducting water-blocking tape
- aluminum water-blocking foil (for XRUHAKXS)
- PE outer sheath

Application	<ul style="list-style-type: none"> – for laying in the ground (trenches), regardless of the degree of corrosive activity of soils and waters, with protection against mechanical damage – for laying in damp, partly flooded premises, in non-navigable reservoirs (for XRUHAKXS)
Ambient temperature	from –60 °C up to +50 °C
Permissible conductor temperature:	
– normal mode	90 °C
– alarm mode	130 °C
– short-circuit mode	250 °C
Permissible screen short-circuit temperature	350 °C
Minimum bending radius	16·D
Test voltage (50 Hz)	2,5·U ₀ , 30 min
Partial discharge level at 1,5·U₀ A.C.	5 pC
Maximum permissible pulling force at installing	30 N/mm ²
Minimum permissible temperature at installing	–20 °C
Design options	<ul style="list-style-type: none"> – conductor sealed of water-blocking yarns – semiconductor layer on the outer sheath – fibre optic module in the screen
Flame resistance	not determined
CPR - reaction to fire class according to EN 50575	Fca

Permissible current loads are calculated for following conditions:								
- conductor temperature 90 °C; - air temperature 30 °C; - ground temperature 20 °C; - laying depth in ground 1,5 m; - soil thermal resistance 1,0 K·m/W; - nominal cross-section area of screen 95 mm ²								
* grounding method: BE — Both-ends; SPB — Single Point Bonding; CB — Cross-bonding.								

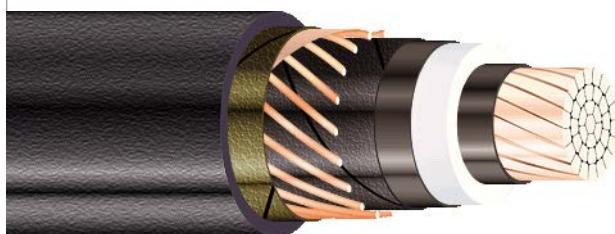

Nominal cross-section area of core, mm ²	70	95	120	150	185	240	300	350	400	500	630	800	1000	1200	1400	1600	2000

Nominal cross-section area of screen, mm ²	25	35	50	70	95	120	150	185	240	300
1-second short-circuit screen capacity*, kA	5,1	7,1	10,2	14,2	19,3	24,4	30,4	37,6	48,7	60,8

* if the short-circuit time is different from 1 s, this value must be multiplied by the factor (1/ \sqrt{t})

COPPER SINGLE-CORE CABLES WITH PE OUTER SHEATH

IEC 60840

**Design**

- copper compacted conductor RMC, cl. 2
(above 1200 mm² — RMS Milliken type)
- inner semiconductor layer
- XLPE insulation
- outer semiconductor layer
- semiconducting water-blocking tape
- copper wire screen and copper tape counter-helix
- semiconducting water-blocking tape
- aluminum water-blocking foil (for XRUHKXS)
- PE outer sheath

Application	– for laying in the ground (trenches), regardless of the degree of corrosive activity of soils and waters, with protection against mechanical damage – for laying in damp, partly flooded premises, in non-navigable reservoirs (for XRUHKXS)
Ambient temperature	from –60 °C up to +50 °C
Permissible conductor temperature:	
– normal mode	90 °C
– alarm mode	130 °C
– short-circuit mode	250 °C
Permissible screen short-circuit temperature	350 °C
Minimum bending radius	16·D
Test voltage (50 Hz)	2,5·U ₀ , 30 min
Partial discharge level at 1,5·U₀ A.C.	5 pC
Maximum permissible pulling force at installing	50 N/mm ²
Minimum permissible temperature at installing	–20 °C
Design options	<ul style="list-style-type: none"> – conductor sealed of water-blocking yarns – semiconductor layer on the outer sheath – fibre optic module in the screen
Flame resistance	not determined
CPR - reaction to fire class according to EN 50575	Fca

45 kV

1-second short-circuit screen capacity*, kA	5,1	7,1	10,2	14,2	19,3	24,4	30,4	37,6	48,7	60,8

* if the short-circuit time is different from 1 s, this value must be multiplied by the factor (1/ \sqrt{t})

ALUMINUM SINGLE-CORE CABLES WITH PVC FLAME-RETARDANT OUTER SHEATH

IEC 60840

**Design**

- aluminum compacted conductor RMC, cl. 2 (above 1200 mm² — RMS Milliken type)
- inner semiconductor layer
- XLPE insulation
- outer semiconductor layer
- semiconducting water-blocking tape
- copper wire screen and copper tape counter-helix
- glass wool tape
- PVC flame-retardant outer sheath

Application

- in premises, tunnels, canals, mines, dry ground and outdoors under a canopy with protection against mechanical damage
- for group laying in cable structures, premises (including those in fire hazardous areas)
- for laying at facilities where requirements are imposed for reduced smoke emission during combustion and smoldering: nuclear power plants, power stations, subways, high-rise buildings, large industrial facilities, etc.

Ambient temperature

from –50 °C up to +50 °C

Permissible conductor temperature:

- | | |
|----------------------|--------|
| – normal mode | 90 °C |
| – alarm mode | 130 °C |
| – short-circuit mode | 250 °C |

Permissible screen short-circuit temperature

350 °C

Minimum bending radius

16·D

Test voltage (50 Hz)2,5·U_o, 30 min**Partial discharge level at 1,5·U_o A.C.**

5 pC

Maximum permissible pulling force at installing30 N/mm²**Minimum permissible temperature at installing**

–15 °C

Design options

- conductor sealed of water-blocking yarns
- semiconductor layer on the outer sheath
- fibre optic module in the screen
- PVC flame-retardant outer sheath

Flame resistance

EN 60332-1-2

CPR - reaction to fire class according to EN 50575

Eca

COPPER SINGLE-CORE CABLES WITH PVC FLAME-RETARDANT OUTER SHEATH

IEC 60840

**Design**

- copper compacted conductor RMC, cl. 2 (above 1200 mm² — RMS Milliken type)
- inner semiconductor layer
- XLPE insulation
- outer semiconductor layer
- semiconducting water-blocking tape
- copper wire screen and copper tape counter-helix
- glass wool tape
- PVC flame-retardant outer sheath

Application

- in premises, tunnels, canals, mines, dry ground and outdoors under a canopy with protection against mechanical damage
- for group laying in cable structures, premises (including those in fire hazardous areas)
- for laying at facilities where requirements are imposed for reduced smoke emission during combustion and smoldering: nuclear power plants, power stations, subways, high-rise buildings, large industrial facilities, etc.

Ambient temperature

from –50 °C up to +50 °C

Permissible conductor temperature:

- | | |
|----------------------|--------|
| – normal mode | 90 °C |
| – alarm mode | 130 °C |
| – short-circuit mode | 250 °C |

Permissible screen short-circuit temperature

350 °C

Minimum bending radius

16·D

Test voltage (50 Hz)2,5·U₀, 30 min**Partial discharge level at 1,5·U₀ A.C.**

5 pC

Maximum permissible pulling force at installing50 N/mm²**Minimum permissible temperature at installing**

–15 °C

Design options

- conductor sealed of water-blocking yarns
- semiconductor layer on the outer sheath
- fibre optic module in the screen
- PVC flame-retardant outer sheath

Flame resistance

EN 60332-1-2

CPR - reaction to fire class according to EN 50575

Eca

COPPER SINGLE-CORE CABLES WITH POLYMER COMPOSITION FLAME-RETARDANT OUTER SHEATH	
IEC 60840	
	<p>Design</p> <ul style="list-style-type: none"> – copper compacted conductor RMC, cl. 2 (above 1200 mm² — RMS Milliken type) – inner semiconductor layer – XLPE insulation – outer semiconductor layer – semiconducting water-blocking tape – copper wire screen and copper tape counter-helix – semiconducting water-blocking tape (XnRUHAKXS, XnRUHAKXS-HF) or glass wool tape (XnHAKXS, XnHAKXS-HF) – aluminum water-blocking foil (XnRUHAKXS, XnRUHAKXS-HF) – polymer composition flame-retardant outer sheath (XnHAKXS, XnRUHAKXS) or halogen free outer sheath (XnHAKXS-HF, XnRUHAKXS-HF)
Application	<ul style="list-style-type: none"> – in premises, tunnels, canals, mines, dry ground and outdoors under a canopy with protection against mechanical damage – for group laying in cable structures, premises (including those in fire hazardous areas) – for laying at facilities where requirements are imposed for reduced smoke emission during combustion and smoldering: nuclear power plants, power stations, subways, high-rise buildings, large industrial facilities, etc. (XnHKXS-HF, XnRUHKXS-HF) – for laying in damp, partly flooded premises (XnRUHKXS, XnRUHKXS-HF)
Ambient temperature	from –60 °C up to +50 °C
Permissible conductor temperature:	
– normal mode	90 °C
– alarm mode	130 °C
– short-circuit mode	250 °C
Permissible screen short-circuit temperature	350 °C
Minimum bending radius	16·D
Test voltage (50 Hz)	2,5·U ₀ , 30 min
Partial discharge level at 1,5·U₀ A.C.	5 pC
Maximum permissible pulling force at installing	50 N/mm ²
Minimum permissible temperature at installing	–15 °C
Design options	<ul style="list-style-type: none"> – conductor sealed of water-blocking yarns – semiconductor layer on the outer sheath – fibre optic module in the screen – PVC flame-retardant outer sheath
Flame resistance	EN 60332-1-2
CPR - reaction to fire class according to EN 50575	Eca

45 kV

* if the short-circuit time is different from 1 s, this value must be multiplied by the factor (1/ \sqrt{t})

45–150 kV | SINGLE-CORE CABLES

ALUMINUM SINGLE-CORE CABLES WITH LEAD SHEATH

IEC 60840

Design

- aluminum compacted conductor RMC, cl. 2 (above 1200 mm² — RMS Milliken type)
- inner semiconductor layer
- XLPE insulation
- outer semiconductor layer
- semiconducting water-blocking tape
- semiconducting tape
- extruded lead alloy sheath
- outer sheath: of PE, PVC, flame-retardant PVC or halogen-free flame-retardant polymer compound

Application	<ul style="list-style-type: none"> – for laying in damp, partly flooded premises, in non-navigable reservoirs (halogen-free flame-retardant cables) – for laying in very wet soils, in marshy areas, with high corrosivity of soil and water (PE sheathed cables) – in premises, tunnels, canals, mines and outdoors (PVC sheathed cables) – for group laying in cable structures, premises (including those in fire hazardous areas) (flame-retardant PVC sheathed cables) – for laying at facilities where requirements are imposed for reduced smoke emission during combustion and smoldering (flame-retardant PVC or halogen-free sheathed cables) and for low corrosion activity of combustion products (halogen-free flame-retardant sheathed cables) – if mechanical stresses are possible, excluded significant tensile forces
Ambient temperature	from -50 °C up to +50 °C (PVC and flame-retardant PVC sheathed cables) from -60 °C up to +50 °C (the rest types)
Permissible conductor temperature:	<ul style="list-style-type: none"> – normal mode 90 °C – alarm mode 130 °C – short-circuit mode 250 °C
Permissible screen short-circuit temperature	210 °C
Minimum bending radius	25-D
Test voltage (50 Hz)	2,5·U ₀ , 30 min
Partial discharge level at 1,5·U₀ A.C.	5 pC
Maximum permissible pulling force at installing	30 N/mm ²
Minimum permissible temperature at installing	-20 °C (PE sheathed cables) -15 °C (the rest types)
Design options	<ul style="list-style-type: none"> – conductor sealed of water-blocking yarns – semiconductor layer on the outer sheath – PVC flame-retardant outer sheath
Flame resistance	not determined (PE sheathed cables) / EN 60332-1-2 (the rest types)
CPR - reaction to fire class according to EN 50575	Fca (PE sheathed cables) / Eca (the rest types)

Permissible current loads are calculated for following conditions:								
<ul style="list-style-type: none"> - conductor temperature 90 °C; - air temperature 30 °C; - ground temperature 20 °C; - laying depth in ground 1,5 m; - soil thermal resistance 1,0 K·m/W; - nominal cross-section area of screen 95 mm² 								
* grounding method: BE — Both-ends; SPB — Single Point Bonding; CB — Cross-bonding.								

Nominal cross-section area of core, mm ²	70	95	120	150	185	240	300	350	400	500	630	800	1000	1200	1400	1600	2000
1-second short-circuit conductor capacity*, kA	6,6	8,9	11,3	14,2	17,5	22,7	28,2	32,9	37,6	47,0	59,0	75,2	94	112,8	131,6	150,4	188
Nominal cross-section area of screen, mm ²	25		35		50		70		95		120						
1-second short-circuit screen capacity*, kA	5,1		7,1		10,2		14,2		19,3		24,4						

* if the short-circuit time is different from 1 s, this value must be multiplied by the factor $(1/\sqrt{t})$. In the above tables, not the actual cross-section of the lead sheath is given, but the cross-section of the copper screen that allows the same short-circuit current capacity.

45–150 kV | SINGLE-CORE CABLES

Copper cables with lead sheath

COPPER SINGLE-CORE CABLES WITH LEAD SHEATH

IEC 60840

Design

- copper compacted conductor RMC, cl. 2 (above 1200 mm² — RMS Milliken type)
- inner semiconductor layer
- XLPE insulation
- outer semiconductor layer
- semiconducting water-blocking tape
- semiconducting tape
- extruded lead alloy sheath
- outer sheath: of PE, PVC, flame-retardant PVC or halogen-free flame-retardant polymer compound

Application	<ul style="list-style-type: none"> – for laying in damp, partly flooded premises, in non-navigable reservoirs (halogen-free flame-retardant cables) – for laying in very wet soils, in marshy areas, with high corrosivity of soil and water (PE sheathed cables) – in premises, tunnels, canals, mines and outdoors (PVC sheathed cables) – for group laying in cable structures, premises (including those in fire hazardous areas) (flame-retardant PVC sheathed cables) – for laying at facilities where requirements are imposed for reduced smoke emission during combustion and smoldering (flame-retardant PVC or halogen-free sheathed cables) and for low corrosion activity of combustion products (halogen-free flame-retardant sheathed cables) – if mechanical stresses are possible, excluded significant tensile forces
Ambient temperature	from -50 °C up to +50 °C (PVC and flame-retardant PVC sheathed cables) from -60 °C up to +50 °C (the rest types)
Permissible conductor temperature:	<ul style="list-style-type: none"> – normal mode 90 °C – alarm mode 130 °C – short-circuit mode 250 °C
Permissible screen short-circuit temperature	210 °C
Minimum bending radius	25·D
Test voltage (50 Hz)	2,5·U ₀ , 30 min
Partial discharge level at 1,5·U₀ A.C.	5 pC
Maximum permissible pulling force at installing	50 N/mm ²
Minimum permissible temperature at installing	-20 °C (PE sheathed cables) -15 °C (the rest types)
Design options	<ul style="list-style-type: none"> – conductor sealed of water-blocking yarns – semiconductor layer on the outer sheath – PVC flame-retardant outer sheath
Flame resistance	not determined (PE sheathed cables) / EN 60332-1-2 (the rest types)
CPR - reaction to fire class according to EN 50575	Fca (PE sheathed cables) / Eca (the rest types)

Permissible current loads are calculated for following conditions:

- conductor temperature 90 °C;
- air temperature 30 °C;
- ground temperature 20 °C;
- laying depth in ground 1,5 m;
- soil thermal resistance 1,0 K·m/W;
- nominal cross-section area of screen 95 mm²

* grounding method:
BE — Both-ends;
SPB — Single Point Bonding;
CB — Cross-bonding.

Nominal cross-section area of core, mm ²	70	95	120	150	185	240	300	350	400	500	630	800	1000	1200	1400	1600	2000
1-second short-circuit conductor capacity*, kA	10	13,6	17,2	21,5	26,5	34,3	42,9	50,1	57,2	71,5	90,1	114,4	143	171,6	200,2	228,8	286
Nominal cross-section area of screen, mm ²	25			35			50			70			95				
1-second short-circuit screen capacity*, kA	5,1			7,1			10,2			14,2			19,3				

* if the short-circuit time is different from 1 s, this value must be multiplied by the factor $(1/\sqrt{t})$. In the above tables, not the actual cross-section of the lead sheath is given, but the cross-section of the copper screen that allows the same short-circuit current capacity.

Aluminum cables with lead sheath with copper screen

ALUMINUM SINGLE-CORE CABLES WITH LEAD SHEATH WITH COPPER SCREEN	
	IEC 60840
	<p>Design</p> <ul style="list-style-type: none"> – aluminum compacted conductor RMC, cl. 2 (above 1200 mm² — RMS Milliken type) – inner semiconductor layer – XLPE insulation – outer semiconductor layer – semiconducting water-blocking tape – copper wire screen and copper tape counter-helix – semiconducting water-blocking tape – semiconducting tape – extruded lead alloy sheath – outer sheath: of PE, PVC, flame-retardant PVC or halogen-free flame-retardant polymer compound
Application	<ul style="list-style-type: none"> – for laying in damp, partly flooded premises, in non-navigable reservoirs (halogen-free flame-retardant cables) – for laying in very wet soils, in marshy areas, with high corrosivity of soil and water (PE sheathed cables) – in premises, tunnels, canals, mines and outdoors (PVC sheathed cables) – for group laying in cable structures, premises (including those in fire hazardous areas) (flame-retardant PVC sheathed cables) – for laying at facilities where requirements are imposed for reduced smoke emission during combustion and smoldering (flame-retardant PVC or halogen-free sheathed cables) and for low corrosion activity of combustion products (halogen-free flame-retardant sheathed cables) – if mechanical stresses are possible, excluded significant tensile forces
Ambient temperature	from –50 °C up to +50 °C (PVC and flame-retardant PVC sheathed cables) from –60 °C up to +50 °C (the rest types)
Permissible conductor temperature:	<ul style="list-style-type: none"> – normal mode 90 °C – alarm mode 130 °C – short-circuit mode 250 °C
Permissible screen short-circuit temperature	210 °C
Minimum bending radius	25·D
Test voltage (50 Hz)	2,5·U ₀ , 30 min
Partial discharge level at 1,5·U₀ A.C.	5 pC
Maximum permissible pulling force at installing	30 N/mm ²
Minimum permissible temperature at installing	–20 °C (PE sheathed cables) –15 °C (the rest types)
Design options	<ul style="list-style-type: none"> – conductor sealed of water-blocking yarns – semiconductor layer on the outer sheath – PVC flame-retardant outer sheath
Flame resistance	not determined (PE sheathed cables) / EN 60332-1-2 (the rest types)
CPR - reaction to fire class according to EN 50575	Fca (PE sheathed cables) / Eca (the rest types)

<ul style="list-style-type: none"> - conductor temperature 90 °C; - air temperature 30 °C; - ground temperature 20 °C; - laying depth in ground 1,5 m; - soil thermal resistance 1,0 K·m/W; - nominal cross-section area of screen 95 mm² 								
* grounding method: BE — Both-ends; SPB — Single Point Bonding; CB — Cross-bonding.								

Nominal cross-section area of core, mm ²	70	95	120	150	185	240	300	350	400	500	630	800	1000	1200	1400	1600	2000
1-second short-circuit conductor capacity*, kA	6,6	8,9	11,3	14,2	17,5	22,7	28,2	32,9	37,6	47,0	59,0	75,2	94	112,8	131,6	150,4	188

Nominal cross-section area of core, mm ²	50	70	95	120	150	185	240	300
1-second short-circuit screen capacity*, kA	10,2	14,2	19,3	24,4	30,4	37,6	48,7	60,8

* if the short-circuit time is different from 1 s, this value must be multiplied by the factor $(1/\sqrt{t})$. In the above tables, not the actual cross-section of the copper screen and lead sheath is given, but the cross-section of the copper screen that allows the same short-circuit current capacity. In the calculations, the minimal cross-section of the copper screen under the lead sheath is assumed. If it is necessary to increase the short-circuit current capacity, the cable may have an increased cross-section of the copper screen.

Copper with lead sheath with copper screen

COPPER SINGLE-CORE CABLES WITH LEAD SHEATH WITH COPPER SCREEN	
IEC 60840	
	Design <ul style="list-style-type: none"> – copper compacted conductor RMC, cl. 2 (above 1200 mm² — RMS Milliken type) – inner semiconductor layer – XLPE insulation – outer semiconductor layer – semiconducting water-blocking tape – copper wire screen and copper tape counter-helix – semiconducting water-blocking tape – semiconducting tape – extruded lead alloy sheath – outer sheath: of PE, PVC, flame-retardant PVC or halogen-free flame-retardant polymer compound
Application	<ul style="list-style-type: none"> – for laying in damp, partly flooded premises, in non-navigable reservoirs (halogen-free flame-retardant cables) – for laying in very wet soils, in marshy areas, with high corrosivity of soil and water (PE sheathed cables) – in premises, tunnels, canals, mines and outdoors (PVC sheathed cables) – for group laying in cable structures, premises (including those in fire hazardous areas) (flame-retardant PVC sheathed cables) – for laying at facilities where requirements are imposed for reduced smoke emission during combustion and smoldering (flame-retardant PVC or halogen-free sheathed cables) and for low corrosion activity of combustion products (halogen-free flame-retardant sheathed cables) – if mechanical stresses are possible, excluded significant tensile forces
Ambient temperature	from –50 °C up to +50 °C (PVC and flame-retardant PVC sheathed cables) from –60 °C up to +50 °C (the rest types)
Permissible conductor temperature: <ul style="list-style-type: none"> – normal mode – alarm mode – short-circuit mode 	90 °C 130 °C 250 °C
Permissible screen short-circuit temperature	210 °C
Minimum bending radius	25·D
Test voltage (50 Hz)	2,5·U ₀ , 30 min
Partial discharge level at 1,5·U₀ A.C.	5 pC
Maximum permissible pulling force at installing	50 N/mm ²
Minimum permissible temperature at installing	–20 °C (PE sheathed cables) –15 °C (the rest types)
Design options	<ul style="list-style-type: none"> – conductor sealed of water-blocking yarns – semiconductor layer on the outer sheath – PVC flame-retardant outer sheath
Flame resistance	not determined (PE sheathed cables) / EN 60332-1-2 (the rest types)

Note: the cable parameters shown on pages 11–58 are calculated, the technical characteristics of the cables manufactured may differ from those stated.

Correction factors for permissible current calculation

Permissible current loads are calculated for following conditions:

- conductor temperature 90 °C
- both-ends grounding

In air:

- air temperature 30 °C
- single-core cables in flat formation are spacing with a clearance of one cable diameter

In ground:

- ground temperature 20 °C
- laying depth 1.5 m
- soil thermal resistance 1.0 K·m/W
- pipes are not filled by any substances such as bentonite
- single-core cables in flat formation are spacing with a clearance of one cable diameter

If the cables are laid in pipes filled with bentonite, they are treated as directly buried cables.

CORRECTION FACTORS FOR AMBIENT AIR AND GROUND TEMPERATURES

CORRECTION FACTORS FOR CABLE GROUPS LAID IN THE AIR

Cable group quantity (except the spared)		1	2	3	Location option
1. Cables are laid on the ground surface ¹		0,97	0,94	0,93	
2. Cables are laid on the shelves (without air circulation) ²	Number of shelves				
	1	0,97	0,94	0,93	
3. Cables are laid on the trays (with air circulation) ²	Number of trays				
	1	1,00	0,97	0,96	
	2	0,98	0,95	0,94	
4. Cables are laid on the ground surface ³		0,96	0,91	0,88	

¹ Heating from neighboring groups is taken into account at $e/D \leq 1$ — for 2 groups; $\leq 1,5$ — for 3 groups

² Heating from neighboring groups is taken into account if the gap between the cable and the shelf located above is smaller than $4D$ and the distance between the cables on one shelf is the same as indicated in ⁽¹⁾

³ Heating from neighboring groups is taken into account at $e/D \leq 0,5$ — for 2 groups; $\leq 0,75$ — for 3 groups

CORRECTION FACTORS FOR LAYING IN THE PIPES AND CHANNELS

Laying conditions	Pipe internal diameter					
	1.5 De	2 De	2.5 De	3 De	3.5 De	4 De
Cables are laid in separate pipes in the ground or in the air with protection from solar radiation	0,90	0,91	0,92	0,93	0,94	0,95
Three cables are laid in one pipe in the ground or in the air with protection from solar radiation	0,90	0,91	0,92	0,93	0,94	0,95
Three cables are laid in a pipe exposed to solar radiation with an intensity of 1000 W/m ² :						
– in a steel pipe	0,77	0,77	0,78	0,79	0,80	0,81
– in a plastic pipe	0,78	0,79	0,80	0,81	0,82	0,83
Cables are laid in a pipe filled with bentonite	1,00	1,00	1,00	1,00	1,00	1,00
De — cable diameter (when three cables are laid in a pipe, De is equal to 2,15 x diameter of one cable)

Cables packaging and delivery

Cables are supplied on the lined wooden drums with a snail according to GOST 5151-79.

The ends of the cables during transport and storage are sealed with heat shrinkable caps to prevent the penetration of water, and are fixed. During laying, the cap should be removed directly before installation. If the caps were removed prematurely, the cable ends should be protected from moisture.

During the storage, loading and transportation of cables, it is necessary to ensure control and necessary repair of the outer sheath and protective cap to avoid penetration of water under the outer sheath.

D — drum diameter with packaging plank

d_1 — drum flange diameter

d_2 — drum barrel diameter

d_3 — diameter of the axial hole

A — packaging plank length

Drum type	Dimensions, mm						Calculated drum mass, kg	
	D	d_1	d_2	A	d_3	without packaging plank	with packaging plank
